SUMMARY

Senior backend engineer with 6 years of experience building production systems in Typescript and Node.js, with additional experience across Go, C#/.NET, and Ruby on Rails. Experienced at taking ownership of ambiguous problems and driving measurable performance improvements. Passionate about solving real world problems and creating a positive impact for users.

WORKING EXPERIENCE

Senior Backend Developer – Spresso.AI (formerly Boxed) · New York, US (Remote) April 2022 to Present

- Developed and maintained end to end e-commerce platforms in TypeScript for major retailers across Southeast Asia including AEON malls, supporting 150,000+ SKUs across multiple storefronts
- Architected and built a headless enterprise fulfilment platform with partner-configurable webhooks and third-party integrations, designed around dependency-injection with full OpenAPI specifications
- Designed a memory-efficient catalogue export pipeline for 50,000+ SKUs and 800,000+ rows, optimising database queries and streaming results to prevent timeouts and excessive memory usage.
- Assumed ownership of a legacy Go codebase, ramping up quickly in a new language to maintain, refactor, and deliver new features
- Partnered with engineering teams across 6+ third-party providers to design and deliver end-to-end integrations across payment providers, user loyalty systems, and logistics providers
- Drove company-wide logging improvements that removed 3M+ daily logs, reduced costs, and established standardised logging practices
- Led technical scoping for new features, working with Product to translate business requirements into technical plans, and aligning with frontend on delivery

Backend Developer – Dynamite Games · Singapore **Oct 2020 to Mar 2022**

- Developed backend features on .NET, C#, and MongoDB for a product with 160,000 daily active users.
- Migrated and rewrote a Ruby on Rails monolithic service to a microservice architecture on .NET, MySQL, and AWS

Backend Developer Intern – Saleswhale (YC S16) · Singapore May 2019 to Oct 2019

- Backend development on a Ruby on Rails stack, building multiple new features and writing RESTful API endpoints for both internal and external facing tools.
- Contributed to frontend development involving Node.js and EmberJS, implementing new components and fixing user-impacting bugs.

EDUCATION

Singapore University of Technology and Design **Singapore**

Bachelor of Engineering (Computer Science and Design) **May 2017 to Sep 2020**

Singapore

May 2017 to Sep 2020

ZheJiang University **Hangzhou, China**

SUTD ASEAN Leadership Exchange Programme, **May 2018 to Aug 2018**

Hangzhou, China

May 2018 to Aug 2018

PUBLICATIONS / ACADEMIC PROJECTS

Cryptocurrency Clone Vulnerability Research Paper **Oct 2018 to Oct 2019**

Oct 2018 to Oct 2019

- Research paper involving using code clone detection to detect and map existing vulnerabilities in Bitcoin to alt cryptocurrencies.
- Published in [IEEE 2020 International Conference on Blockchain](#)

Common Vulnerabilities and Exposures (CVE) Extensions

- Obtained extensions for 4 different CVEs (CVE-2018-17144, CVE-2019-7167, CVE-2016-10724, CVE-2016-10725) on Mitre and NIST
- CVE explanations can be found at <https://github.com/JinBean/CVE-Extension>

Accenture Web Application Project**Apr 2018 to May 2019**

- Designed and built a help ticket management system (Flask, MongoDB) with ticket tracking, live chat, and role-based account management
- Selected as the Best Accenture Ticketing System Project out of 18 participating groups.

SKILLS

- **Languages:** TypeScript, Python, C#, Ruby, Go
- **Backend & Databases:** Node.js, .NET, MySQL, MongoDB, Redis
- **Cloud & Tools:** AWS, GCP, GitHub Actions
